

CONNECTING BUSINESS & IT

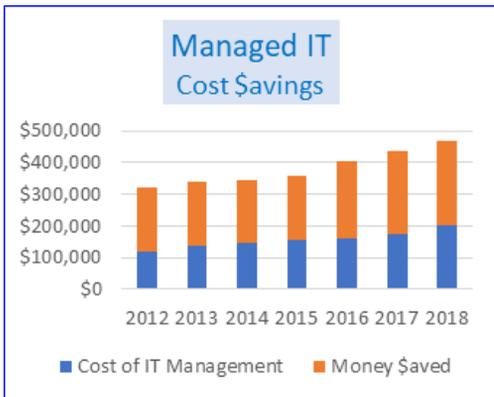

IT Infrastructure = Framework | Data = Business Asset

Case Studies

Managed IT Services

Wildcat Energy

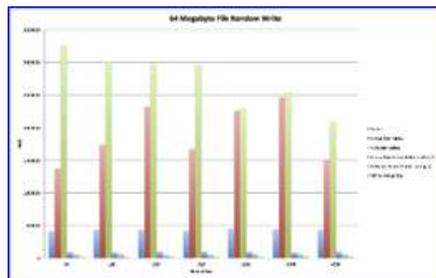

- How we helped save:
Saved ~\$165k/year with Managed IT

Virtualization

Argon Inc.

- How we helped save:
ROI: \$100k/year

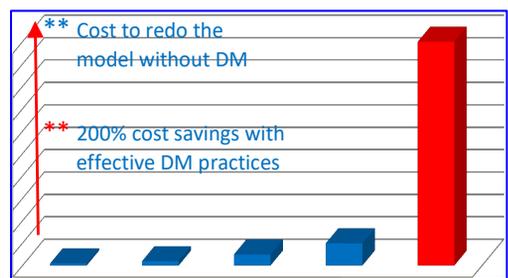

- Scalable IT infrastructure catering to emerging business needs
- Performance improvements
- Secured enterprise data from threats
- Documented process and procedures

Data Management

Petcor Energy Services

- How we helped:
ROI: \$250k/year on Data Management

- Data QC
- Data Cleaning
- Data Validation
- Data Integration
- Model Building

IT Solutions

Getting IT Right

Reliable Inc.

Getting IT Right

Infrastructure Assessment

- ▶ IT assessment is the first step towards understanding your current state of technology and prepare your organization for future needs and growth. Assessment will determine the health of your infrastructure and data. We will examine technologies and highlights the opportunities to improve your business operations.

On-Demand IT

- ▶ Whether you need help with the demands of a specific project, need to augment your own IT team, or need immediate direct support and monitoring, our on-demand IT model will overcome your everyday IT challenges. We will provide vital hardware, software & application support services with a rapid response to support calls that will reduce downtime for business.

Data Security

- ▶ Managed security services will protect your business from constant onslaught of data breaches and security compromises. We will setup security on the infrastructure, ensuring regulatory compliance, monitoring all threats 24/7, and maintaining strong data protection. We will utilize well-tested & leading-edge technologies including artificial intelligence, machine learning, and threat intelligence. Our services will help you reduce the cost and make it predictable.

Cloud Migration: Azure/AWS - Office 365

- ▶ Cloud migration services will evaluate the benefits and risks to your business. Customers that migrate to cloud can experience 51% reduced costs of operations, 62% increased IT staff productivity, and 94% reductions in downtime. Cloud migration will certainly help if you are experiencing increased traffic and it is becoming difficult to scale resources on the fly to meet the increasing demand. Other major benefits are improved analytics and disaster recovery.

Custom Software

- ▶ Custom software includes development of website, mobile application, ETL for data migration, and applications. We will develop desired goal-oriented solutions that will address the needs that are not catered by any off-the-shelf solution. We will ensure your data flows readily between disparate systems. We will design custom application that will automate the process rather than relying on manually exporting, converting, and reuploading it.

Virtualization

- ▶ Virtualization services will increase IT agility, flexibility and scalability while creating significant savings - reducing capital and operating costs. It will make IT simpler to manage. You will be able to move server workloads between your virtual workspaces, boosting your server resources on the go, depending on your needs in every situation. Our services will ensure that you are operating your hardware and software infrastructure with full capacity

Data Solutions

Extracting hidden \$\$\$ value from your data assets

Reliable Inc.
Getting IT Right

Data Assessment

- ▶ Data assessment should be the first step towards building or refining your data infrastructure. This will lead to a broader understanding towards quantitative as well as qualitative nature of the data assets. We have designed a simple 4-step process -define business goals, data source inventory & classification (structured and unstructured) data quality assessment, qualitative and quantitative reporting.

Data Cleaning

- ▶ Key benefits of data cleaning will be removal of data errors and inconsistencies in multiple sources, making analysis and decision based on data more accurate. We will provide software and services to help you with data cleansing. Our data cleansing process will spot & rectifying inaccurate or corrupt data from structured or unstructured sources. Once you have completed your data cleaning process, you can confidently move forward using the data for deep, operational insights now that your data is accurate and reliable.

Data Integration/Migration

- ▶ Many valuable data-driven business practices depend on one or more forms of data integration. Key benefits are availability of the data, better insights, better collaboration, improving data integrity and data quality. Data integration in all its practical purpose is blending data from different sources; making it more useful and valuable than it was before. Multi-source data blending will help identify data discrepancies and gaps.

Data Monitoring

- ▶ 37% of business users say data preparation takes up to 50% of their business time. Data monitoring saves the organization time and money that would otherwise be spent to check and transform data before it is moved. By checking data routinely as it is stored within applications, you can avoid the resource-intensive pre-processing of data. Data monitoring solution proactively analyzes your data to ensure that it is accurate, consistent, and fit for the purpose, as-and-when-needed.

Data Analytics

- ▶ Due to the large volume of structured and unstructured data, it often becomes difficult to manage and procure relevant information from them. Data analytics tools are capable of handling heterogeneous data and provide insights out of them. By bringing together data from across the business, companies can get hidden insights to identify problems and enable teams within your teams to collaborate better, achieve better results, and outperform the competition

Data Science

- ▶ Most of the businesses have the basic technology to manage the data and the infrastructure for visualization, data mining, and data warehousing. Our services will help you to take a step forward in that direction, where we will develop simple algorithms to extract the hidden patterns to predict the outcome or prescribe the solution to the problem that may occur in the future.

Why Choose Us?

We are the only IT service provider with services sharply focused on IT-Business alignment. We just don't solve your IT issues; we solve your business problems. We have a methodology that had been refined over the years to improve client ROI, from day 1. We value our relationships with managers, customers, vendors, business partners, and co-workers with a strong, positive associations that are open and honest. You will enjoy working with us. Any problem we detect is fixed quickly; response time guaranteed.

Our Story

The idea of Reliable Inc. was born with the need for business-IT alignment. We see IT as a framework and data as an enterprise asset. Our IT approach is focused on the business needs. We are Calgary based licensed and insured corporation, certified with affiliated staff having 12+ years of collective global business experience in the Oil & Gas verticals, Industrial Construction and Engineering.
